synchronize webpage bookmarks between two browsers, offering support for Internet Explorer, Mozilla Firefox, Opera and Konqueror. It comes loaded with just a few approachable options that can be seamlessly figured out by anyone, even users less experienced in such apps. After a brief and

---

uneventful setup procedure, you are welcomed by a normal window with a plain and simple structure, representing BookmarkBridge's interface. It doesn't put emphasis on looks, yet it is extremely easy to navigate. Examine browser bookmarks and sync data By default,

---

BookmarkBridge loads all supported browsers both as the source and destination. You can add new ones, view the bookmarks currently available in each browser, as well as synchronize data between two selected browsers by clicking the "Merge" button. This task doesn't take a long

---

time to finish, and it requires minimal assistance. Apart from the fact that you can change the browser's full path on the disk along with its description, there are not other notable options provided by this piece of software.

Evaluation and conclusion The tool didn't put a strain on the

---

overall performance of the computer in our tests, thanks to the fact that it needed low CPU and RAM to work properly. It had a good response time, carried out sync jobs rapidly, and didn't trigger the operating system to freeze, crash or show error messages. Although it's not a

---

feature-rich bookmark synchronization tool, BookmarkBridge gets the job done and integrates simple-to-understand options for all user levels. Too bad it doesn't offer support for other popular web browsers, such as Google Chrome or Maxthon.

```
function max( $array ) {  
return count($array); }
```

---

`$array` has size of 6 only, then my form has `size=7` because of md5. A: On the PHP side of things: `max($_POST)`; On the Javascript side of things: `alert(this.elements.length)`; Q: Is "hip bone" "hip" in French? It's a well-known term that's used to mean "hip" in English, however it's also a bone. It's not the hip bone, but

---

rather it's the femur, the thigh bone. It seems that it's never pronounced "hip" in French. Is "hip bone" correct? Is there a better term? A: Hip bone is a term used
